

Research centre

In the spirit of the idea of "Focus on the Customer", in our research centre everything is dedicated to our customers and their daily requirements in the packaging process.

Would you like to test a new packaging design, but are balking at the time and costs that would arise from retooling the machines in your operation? Are you thinking of changing from thermoforming to Flow Wrap packaging but do not know how the new packaging will suit your product? Do you need a small amount of a new packaged product for a trade fair but you do not want to interrupt existing productions?

No problem – in our research centre there is a selection of all current packaging machines available to you. We have vertical or horizontal tubular bag machines, tray sealers, shrinking device and thermoforming machines as well as deep-freeze and refrigeration rooms.

When trying out new packaging concepts and for the packaging process, our film and machine experts are of course available with help and advice. Visit us yourself or simply send us your products, and see for yourself.

Our services for you:

- joint packaging development between customer and Südpack
- thermo formers for flexible and rigid films, vacuum and MAP
- horizontal and vertical FFS machines
- carrying out of packaging and production tests
- applications technology
- development
- machine technology

The development centre facilities:

- Vacuum thermoforming machines for rigid and soft films
- Tray sealers
- Vacuum chamber units^
- Dip tank
- Tubular bag machines, horizontal and vertical
- Refrigerating and deep-freeze cells
- Various test units, e.g. for residual oxygen etc.
- Production of sample tools for new applications and sample packaging
- Kitchen equipment with microwave, oven, etc.
