

## **Polyclip**

It does not matter if it is for meat products, pet food, marzipan, processed cheese or technical products, Polyclip adapts to all of them.

With this particularly economical type of packaging, the interior is sealed to the exterior. By using special, shrinkable materials, the packaging adapts optimally to your product.

Tailored to your product, we equip our films with special meat adhesion and provide aluminium composites or composites that can be pasteurised and sterilised.

Naturally we can also print these on the intermediate layer or on the surface.
