

Rigid film - stable and versatile

Films from Südpack

Customised thermoforming

Thermoforming technology makes extremely exacting demands on packaging film. Heat transfer capacity, cutting geometry and technology or sealing parameters are just a few of the aspects that have to be taken into account.

It makes no difference to us what requirements you make. We satisfy them, because we adapt our films to meet your individual needs exactly.

PP-based ecoterm

ecoterm films are the most versatile multilayer films available from SÜDPACK. They are produced on the basis of polypropylene. Polypropylene is known to be one of the lightest plastics there are and absorbs practically no moisture. We supply you ecoterm films in transparent form or, on request, coloured instead. If necessary, they can be supplied with a high EVOH barrier and/or easy-peel treatment. You can use ecoterm films for sterilisation and pasteurisation as well as for microwave food.

PS-based ecoform

SÜDPACK's ecoform film range is based on our proven multilayer polystyrene film. ecoform films are highly suitable for both freezing and hot filling at up to 85° C.

APET-based ecopet

ecopet film is our polyester-based multilayer film. If necessary, ecopet with a high EVOH barrier and/or easy-peel treatment can be supplied.

PS/APET-based ecostar

SÜDPACK ecostar really is the star where rigid films are concerned. It is a gold or silver-metallised multilayer film based on polystyrene or polyester. You emphasise the high quality of your product particularly impressively with ecostar. If necessary, the ecostar film can be supplied with a high EVOH barrier and/or easy-peel treatment.

Rigid and attractive

High-quality rigid films represent a particularly tough challenge when they are being printed. You don't have to accept any compromises here with SÜDPACK as your supplier. Thanks to state-of-the-art technology and decades of know-how, we are equipped for everything. Our ultra-modern gravure printing machines apply up to twelve colours to your film in one operation; the maximum in flexo printing is ten.
