EXPERTISE COMBINED – PRESSURE-SENSITIVE ADHESIVES FROM THE FILM EXPERT

In view of growing environmental awareness and rising food prices, consumers are increasingly trying to minimize food waste. Resealable packaging is becoming increasingly important as it is user-friendly and extends the shelf life of food. They help to reduce moisture loss or absorption, inhibit the growth of microorganisms and preserve the taste of products.

Why choose pressure-sensitive adhesives from SÜDPACK?

SÜDPACK pressure-sensitive adhesives stand for the highest quality, reliable adhesion and excellent processability, making packaging noticeably better in everyday use. Our decades of experience in the development of resealable solutions flow directly into every formulation.

StarBlend pressure-sensitive adhesives impress with their high flexibility and excellent processability across a wide temperature range. Another advantage is the high transparency of the adhesive in extruded films.

The plus for you and your customers

Our extrudable pressure-sensitive adhesives for the production of flexible resealable packaging offer processing and convenience advantages compared to standard market alternatives:

- > high peel strength
- > high resealability not only on first opening

IN DETAIL

StarBlend KLS 16.3 AS Pressure-sensitive adhesives

Density	0,97 g/cm ³ (ISO 1183)
Melt-mass flow rate MFR (150 °C/2,16 kg)	9 g/10 min (ISO 1133B)
Melt-mass flow rate MFR (190 °C/2,16 kg)	40 g/10 min (ISO 1133D)
Processing	Co-extrusion process Blown film extrusion lines
Processing window	140 °C and 200 °C
