

Press release**A strong partner to the healthcare industry: SÜDPACK  
Medica at PharmaPack 2026 in Paris**

**Outstanding service, consistent customer focus, and above all, a product portfolio that combines high quality and functionality with improved environmental performance – at Booth 4F12 at PharmaPack, SÜDPACK Medica will once again showcase PharmaGuard®, its pioneering recyclable blister concept. Also taking center stage: MedGuard® – a comprehensive range of low-particle packaging concepts and pouch solutions for the medical and pharmaceutical industries. As a further highlight, SÜDPACK will present its new MedHub® service, which makes ordering pre-made three-side seal pouches fast and simple – in a wide variety of sizes.**

**The PharmaGuard packaging concept**

... is now available in two versions: In addition to the transparent film, which has already received multiple awards, a white blister film is now also on the market. It offers high opacity and improved legibility when printed. This mono-material solution – free from phthalates, vinyl, PFAS, and halogens – offers an excellent water vapor barrier, outstanding push-through performance, and reliable processability on standard packaging machines. Most importantly, this PP-based blister solution is recyclable and, according to an ISO 14040/44-verified LCA by Sphera, has a significantly lower climate impact than conventional composite materials made of aluminum and PET.

**Under the MedGuard brand**

... SÜDPACK Medica also offers a broad portfolio of packaging systems for medical devices and sensitive products. Robust rigid and flexible films, along with tailored pouch concepts, are manufactured under controlled clean room conditions to ensure maximum product protection, stability, and sterility throughout the entire process chain.

SÜDPACK materials can be equipped with specific barrier and peel properties and are compatible with flexible lidding systems made from film, Tyvek®, or medical-grade paper. These materials seal trays securely and are designed for highly automated processes. The thermoformable rigid films are based on recyclable PET and PP, making them ideal for tray packaging used to secure surgical kits, instruments, syringes, and ampoules in place. Various packaging materials made of film, paper or aluminum can also be processed into pouches on standard form-fill-seal systems – and configured to meet customer-specific oxygen, moisture and light barrier requirements.

Another major product group to be showcased at PharmaPack will be SÜDPACK Medica's range of pouch concepts. This includes both standardized and customized solutions used as process pouches for bioreactors, as header bags or patched bags for instrument sterilization, and for transferring sterilized products between clean rooms. This product segment also includes the company's three-side-seal pouches, which can be precisely tailored to individual customer requirements in terms of shape, material combinations, functionality, and printing.

#### **MedHub – streamlined portfolio, reliable service**

For customers who require a steady supply of pre-made medical bag and pouch solutions in standard formats, SÜDPACK's new MedHub service is the ideal choice. MedHub offers maximum flexibility, minimal effort, and reliable delivery – either on the requested date or just in time. Manufactured in ISO-classified clean rooms and backed by standardized certifications, these products meet the highest standards of quality and safety for medical use. In Paris, SÜDPACK's film specialists will present this smart service to the public for the first time – demonstrating how easily orders can be placed by phone, email, or online.

**About SÜDPACK Medica AG**

SÜDPACK Medica AG is headquartered in Baar (CH) and is one of the leading suppliers of sterile packaging solutions in Europe as well as a pioneering partner for the global medical, pharmaceutical and diagnostics industries. The company is part of the SÜDPACK Group and was founded in 1989. The core competency of SÜDPACK Medica is the development of plastic-based packaging solutions for sterile goods. The product and performance range of SÜDPACK Medica extends from standard solutions to tailor-made, customer-specific packaging concepts. It includes the production of coextruded flexible and rigid films, which are used as base and lidding films, and of pre-made pouch solutions for a wide variety of products. SÜDPACK Medica also benefits from the SÜDPACK Group's long-standing leadership in technology and innovation in the coextrusion of polymer-based film solutions.

The production of SÜDPACK Medica products is performed at four sites in France, Germany, Switzerland and the Netherlands. These sites are equipped with the latest plant technology and manufacture to the highest standards of quality and hygiene, including the capacity to operate under clean room conditions.

For optimal support and collaboration with their customers around the world, SÜDPACK Medica relies on a specialist team working in quality, sales, development and application technology, one that has long-standing expertise in polymers and process engineering and in the market for sterile packaging. This makes SÜDPACK Medica a competent solutions partner for their customers when it comes to the implementation of packaging solutions, including those with the most demanding requirements.

SÜDPACK is committed to sustainable development and fulfills its responsibility as an employer and towards society, the environment, and its customers. With its own site for processing biopolymers and its own compounding facilities, the SÜDPACK Group is also among the trailblazers in the production of forward-looking, sustainable and recyclable packaging concepts.
