

Product safety, hygiene and quality policy

We take the customer's needs and expectations seriously and meet them consistently. We understand this as quality and measure ourselves and our products against it.

We aim for continuous improvement in order to constantly increase the satisfaction of our customers.

We are committed to providing our customers with safe and legally compliant products of a specified quality, in line with our responsibility to consumer health.

Activities have been defined to improve the culture of product safety, and their effectiveness is regularly reviewed.

The financial and human resources required for the safe manufacturing of our products in compliance with the BRCGS standard are provided.

Group-wide and site-specific quality targets have been defined to measure continuous improvement, and their communication, monitoring and evaluation are available on a day-to-day basis on the Quality Masterboard. These targets are broken down to machine level – as far as possible.

In accordance with our Compliance Guideline, it is possible to report problems regarding the safety, legality, integrity and quality of the product to the Compliance Manager at any time in order to allow problems to be resolved by taking immediate action.

All processes are subject to hazard analysis and risk assessment by multidisciplinary teams on a frequent basis and when changes occur.
