Packaging concept for Skin

As a one-stop-shop supplier, we offer you a complete portfolio of bottom films that are specifically designed to meet the requirements of skin top films. With these holistic packaging concepts, we enable our customers to achieve the highest level of process and packaging reliability.

Our SKINPro can be combined with different bottom films. The range extends from transparent or black film solutions to paper fibre-based concepts: Ecopet is an APET-based rigid film that has particularly good thermoforming properties. Ecocraft Shape is a paper bottom film that can be deformed up to 15 mm. Ecopur is a mono-APET bottom film that, in combination with our SKINPro PET, shows the best sealing properties and optimal opening behavior. To further reduce packaging material, we offer the Ecoterm SV-SKIN, a PP-based bottom film with a high barrier, which, in combination with our SKINPro PP, also provides optimal sealing properties and perfect opening behaviour.

Added Value

VERPACKUNGSKONZEPT

Single source: System application consisting of top and bottom web

HOHE FLEXIBILITÄT

Different packaging variants

HOHE PROZESSSICHERHEIT

Very good thermoforming and sealing behavior for optimized productivity

SÜDPACK
